

How to use Schedule Management to Schedule and Install and Uninstall

PC Network Deploy allows you to schedule and automate tasks created within the program in conjunction with the Windows Task Scheduler. Tasks are scheduled using the steps below to run the tasks unattended.

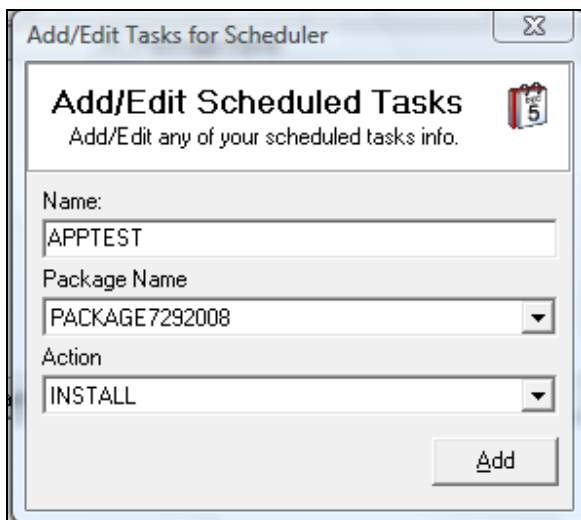

1. Select **Schedule Management > Add Install/Uninstall Tasks for Schedule - (Windows Task Scheduler)**.

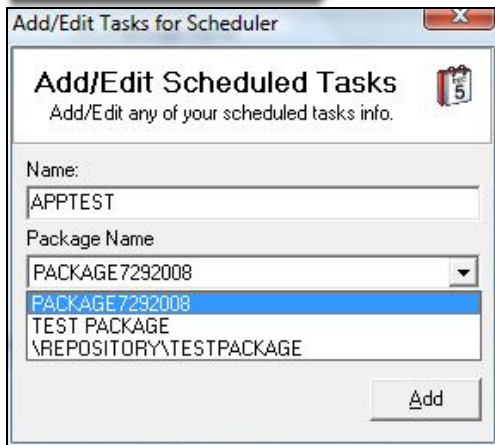

2. Click the **Add** button.

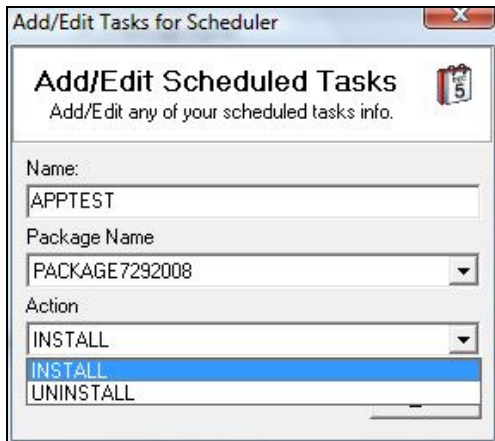

3. Enter a name for the Task.

4. Choose the Package name from the drop down list.

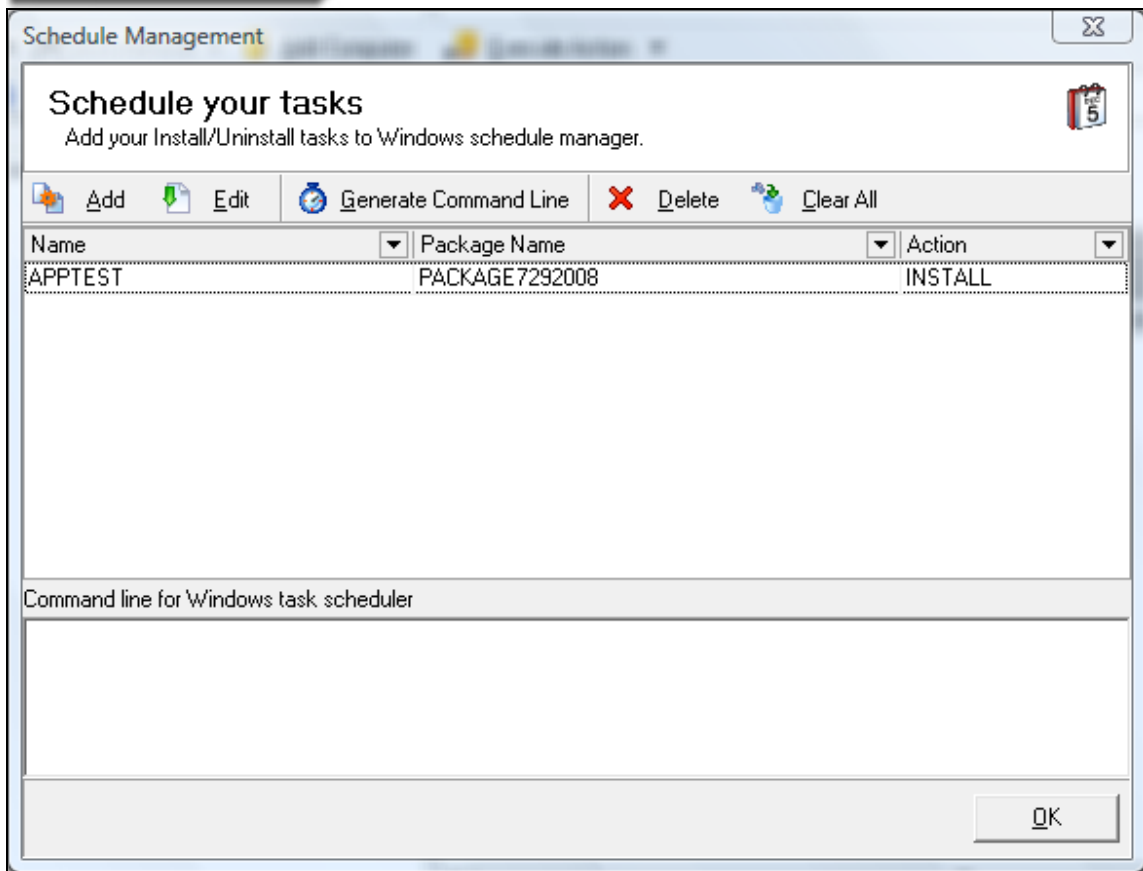

5. Choose whether you want to create an installation or uninstallation action.

6. Click **Ok**.
7. You can see from the screen below that the Task has been added.

8. Click **Ok** when finished.
