

## How to take a Before and After snapshot

1. Select **Program Management > Package Management > Create Package**.

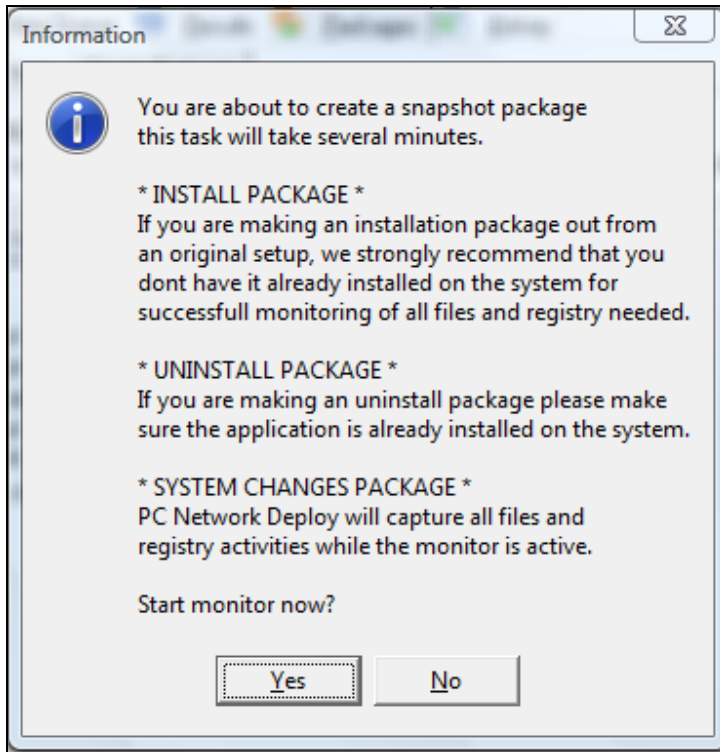

2. Choose the **Take Snapshot (BEFORE) > Take Snapshot of an Installation Modification > My snapshot will not require a reboot OR My snapshot will require a reboot**.

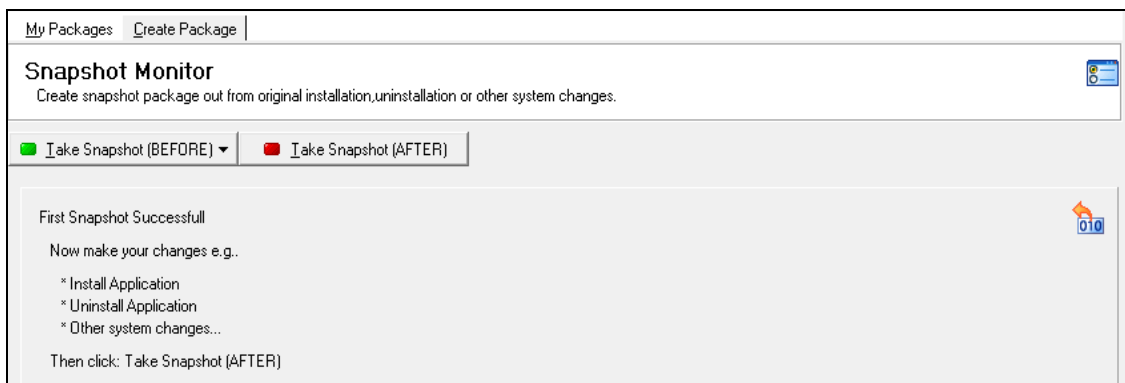

3. Select **Yes** if you are ready to begin the monitor.

4. When the snapshot has completed successfully as shown below, you will need to install, uninstall or make any system changes.

5. Click the **Take Snapshot (AFTER)** button when you have made the necessary changes.

Machine Queue Results Packages History

My Packages Create Package

### Snapshot Monitor

Create snapshot package out from original installation,uninstallation or other system changes.

Take Snapshot (BEFORE)  Take Snapshot (AFTER)

First Snapshot Successfull

Now make your changes e.g.

- \* Install Application
- \* Uninstall Application
- \* Other system changes...

Then click: Take Snapshot (AFTER)
